

Univention Developer Reference

1. Foreword

Print to PDF ►

2. Packaging software

2.1. Introduction

2.2. Preparations

2.3. Example: Re-building an UCS package

2.3.1. Checking out and building a UCS package

2.4. Example: Creating a new UCS package

2.5. Setup repository

2.6. Building packages through the openSUSE Build Service

3. Univention Config Registry

3.1. Using UCR

3.1.1. Using UCR from shell

3.1.2. Using UCR from Python

3.2. Configuration files

3.2.1. `debian/package.univention-config-registry`

3.2.2. `debian/package.univention-config-registry-variables`

3.2.3. `debian/package.univention-config-registry-categories`

3.2.4. `debian/package.univention-service`

3.3. UCR Template files `conffiles/path/to/file`

3.4. Build integration

3.5. Examples

3.5.1. Minimal File example

3.5.2. Multifile example

3.5.3. Services

4. Domain join

4.1 Join scripts

[Skip to main content](#)

4.3. Running join scripts

4.4. Writing join scripts

4.4.1. Basic join script example

4.4.2. Join script exit codes

4.4.3. Join script libraries

4.5. Writing unjoin scripts

5. Lightweight Directory Access Protocol (LDAP) in UCS

5.1. Packaging LDAP Schema Extensions

5.2. Packaging LDAP ACL Extensions

5.3. LDAP secrets

5.3.1. Password change

6. Univention Directory Listener

6.1. Structure of Listener Modules

name

get_name()

description

get_description()

filter

get_ldap_filter()

ldap_filter

attributes

get_attributes()

modrdn

handle_every_delete

priority

get_priority()

6.1.1. Handle LDAP objects

6.1.2. Initialize and clean

6.1.3. Suspend and resume

`get_name()`

`name`

`get_description()`

`description`

`get_ldap_filter()`

`ldap_filter`

`get_attributes()`

`attributes`

`get_priority()`

`priority`

`get_listener_module_instance()`

`get_listener_module_class()`

`listener_module_class`

`get_active()`

`create()`

`modify()`

`remove()`

`initialize()`

`clean()`

`pre_run()`

`post_run()`

`as_root()`

`diff()`

`error_handler()`

`lo`

`po`

`logger`

`ucr`

filter

handler()

setdata()

6.4. Listener tasks and examples

6.4.1. Listener API example

6.4.2. Basic example

6.4.3. Rename and move

6.4.4. Full example with packaging

6.4.5. A little bit more object oriented

6.5. Technical Details

6.5.1. User-ID and Credentials

6.5.2. Internal Cache

6.5.3. Internal working

6.5.4. LDAP Schema handling

6.5.5. Python 3 migration

7. Univention Directory Manager (UDM)

7.1. UDM modules

7.1.1. Overview

7.1.2. Structure of a module

7.1.3. Example module

7.2. UDM syntax

7.2.1. UDM syntax override

7.2.2. UDM LDAP search

7.3. Package extended attributes

7.3.1. Selection lists

7.3.2. Known issues

7.3.3. Extended options

7.3.4. Extended attribute hooks

7.4. Package UDM hooks

7.5. Package UDM extension modules

[Skip to main content](#)

- 7.6. Package UDM syntax extension
- 7.7. UDM HTTP REST API
 - 7.7.1. API clients
- 8. Univention Management Console (UMC)
 - 8.1. Architecture
 - 8.2. Protocol HTTP for UMC
 - 8.3. UMC files
 - 8.3.1. `debian/package.umc-modules`
 - 8.3.2. UMC module declaration file
 - 8.4. Local system module
 - 8.4.1. Python API
 - 8.4.2. UMC module API (Python and JavaScript)
 - 8.4.3. Packaging
 - 8.5. Domain LDAP module
 - 8.6. Disabling a module
- 9. Web services
 - 9.1. Extending the overview page
- 10. App Center
- 11. Integration of external repositories
 - 11.1. Integrate with Univention Management Console
 - 11.2. Integrate with Univention Configuration Registry
- 12. Translate UCS
 - 12.1. Translating a single Debian package
 - 12.1.1. Setup of **univention-l10n-build**
 - 12.1.2. UCS package translation workflow
 - 12.2. Create a translation package for UCS
 - 12.2.1. Install needed tools
 - 12.2.2. Obtain a current checkout of the UCS Git repository
 - 12.2.3. Create translation package
 - 12.2.4. Edit translation files

- 12.2.6. Build the translation package
- 12.3. Editing translation files
 - 12.3.1. Editing translation entries
 - 12.3.2. Update meta information
- 13. Univention Updater
 - 13.1. Separate repositories
 - 13.2. Updater scripts
 - 13.2.1. Digital signature
 - 13.3. Release update walk-through
- 14. Miscellaneous
 - 14.1. Databases
 - 14.1.1. PostgreSQL
 - 14.1.2. MariaDB
 - 14.2. UCS lint
 - 14.3. Function libraries
 - 14.3.1. **shell-univention-lib**
 - 14.3.2. **python-univention-lib**
 - 14.4. Login access control
 - 14.5. Network packet filter
 - 14.5.1. Filter rules by Univention Configuration Registry
 - 14.5.2. Local filter rules through **iptables** commands
 - 14.5.3. Testing Univention Firewall settings
 - 14.6. Active Directory Connection custom mappings
- 15. Appendix
 - 15.1. Bug reporting
 - 15.2. Debian packaging
 - 15.2.1. Prerequisites and preparation
 - 15.2.2. **dh_make**
 - 15.2.3. Debian control files
 - 15.2.4. Building

15.3. Bibliography

15.4. Indices
